

National Science Day 28 February

National Science Day is celebrated in India on 28 February each year to mark the discovery of the Raman effect by Indian physicist Sir Chandrasekhara Venkata Raman on 28 February 1928.

National science day is celebrated as one of the main science festivals in India every year during which students of the schools and colleges demonstrate various sciences. The National Science Day was observed with enthusiasm at Sasmira's Institute of Management Studies & Research by arranging the special session on the topic '**Brahmavidya.**' Mr. Anant Bambawale, Brahmavidya Sadhak was invited as a key note speaker to deliver the lecture on the topic meditation & brainstorming.

Most religions teach that there is a spark of the Divine in every human being. Brahmavidya helps to realize this more clearly and to use the Supreme Intelligence within, in a very practical way. Brahmavidya is not like a medicine, which is meant for a particular ailment. It is a system, which helps to remove root cause of illness and promote health. Hence in principle it is useful for any disorder of body and mind.

Mr Anant Bambawale, Brahmavidya Sadhak at the end gave the message of wisdom to the students as "No matter what your talents, no matter what your ambitions, you should learn the way to call upon the SOURCE OF ALL INSPIRATION within you. **What have you done to get in touch with the Source of all inspiration - the Divine Power within you?** The supreme purpose of Brahmavidya."
